Voicemail Logging/Restoration

The growth of electronic communications, like voicemail and voice logging systems combined with new regulations, have increased the amount of audio content that is now discoverable. The result is a renewed interest in examining such data streams.

Sound Discovery

The emergence of effective audio search technologies has generated greater demand to access and review electronically stored audio files such as voicemail and voice logs.

NDC has been a leader in voicemail and voice logging restoration for over a decade by converting the widest range of formats and operating platforms. We leverage our extensive restoration experience and technology to facilitate the conversion of voice data into easily ingestible and reviewable formats.

Voice Of Experience

This means NDC can take your archived voicemail backups, restore the original content, extract relevant users or time periods and convert the data into a reviewable digital audio file.

Our processing capacity allows us to scale quickly to meet the requirements of the most complex jobs and tightest discovery deadlines.

**The new Federal Rules
of Civil Procedure give much
broader guidance on what
kind of electronically stored
information is required.**

**Recorded audio files
present significant issues
for legal professionals,
corporate compliance
managers, and
government regulators.**
