Compliance E/Risk Management

Game changing technologies create a revolutionary new way to deal with discovery from backup tapes.

Enables early case assessment and electronic discovery strategy refinement. Dramatically lowers costs and risks associated with discovery from backup tapes. Supports information life cycle management and electronic records retention in the realm of legacy tape backups.

Advanced Tape Explorer

Recent amendments to the Federal Rules of Civil Procedure (FRCP) and regulatory compliance mandates are forcing corporations to reevaluate how they manage their backup data and retrieval processes.

Pre-discovery Processing

NDC's Advanced Tape Explorer streamlines the discovery process and minimizes manpower and infrastructure requirements by enabling comprehensive search of backup tapes. Advanced Tape Explorer performs high speed indexing of offline archive tapes by directly connecting to tape drives.

- Directly index offline tapes – without restore.
- Perform full content and metadata searches on tape data to find relevant content.
- Cull through large volumes of offline archives in days and weeks, not months.
- Quickly pinpoint content of interest and produce in a more focused, accurate and timely manner.

The Advanced Tape Explorer Advantage

- Fast and scalable to billions of files—Advanced Tape Explorer technology understands backup formats to directly index tape contents. Because indexing occurs at high speeds, the system can rapidly process large volumes of tapes.
- Discovery of offline tape content has never been easier—Advanced Tape Explorer significantly reduces time and costs surrounding offline tapes and the eDiscovery process. Your enterprise gains comprehensive discovery capabilities earlier in the process at a significantly reduced expense.
- Quick and easy data restoration—Advanced Tape Explorer simplifies the restore process by returning query results with tape ID and file location thereby making restoration more surgical and less voluminous.
